

FREE Recording Software Included

AWRLink software is provided free of charge with your AWR300 wand EID reader.

It will enable you to download lists of tags, print according to tag list group, and use the task mode functions of the wand.

Task mode functions allow you to record a full range of management events for sheep. This may be as simple as recording a comment against animals, or as complex as linking lambs to mothers, with details of birth difficulty, breed, sire, etc.

Downloaded data is saved in spreadsheet format on your computer.

A simple database is maintained, which may be uploaded to the AWR wand to enable you to lookup sheep data in the field.

Software can be downloaded from:
www.tgmsoftware.com/awrlink/setup.htm

When you first run the software on your PC, enter the following code **L5244R7**

The software is provided by and supported by TGM Software Solutions Limited
